

OSWALD DURAND

AI/ML ENGINEER

PROFILE :

I mainly design and develop enterprise-level AI and machine learning applications, specializing in building scalable, secure, and modernized Generative AI platforms and intelligent cloud-based solutions.

EDUCATION :

Howard University

- Bachelor of Science in Mathematics

Cambridge College

- MS in Mathematical Sciences

Southern New Hampshire University

- MS in Supply Chain and Operations Management

LATEST WORK EXPERIENCE :

2022- present

Johnson & Johnson

AI/ ML ENGINEER

- Plan, design, debug, and develop enterprise AI software solutions for Generative AI and machine learning application development. Develop scalable AI-based software using industry best practices and cloud-native technologies. Write and implement efficient and reusable code using Python, Java, Azure OpenAI, and RAG frameworks. Test AI applications to ensure they meet business requirements and perform reliably in production environments. Provide technical support to business users and troubleshoot issues related to AI platforms and data pipelines. Collaborate with machine learning engineers and software developers to ensure solutions are scalable, secure, and high quality. Work with product managers, researchers, and stakeholders to ensure AI systems are designed effectively and meet operational needs. Identify opportunities to improve existing AI models, orchestration workflows, and enterprise automation processes.

SKILL :

Python

Generative AI

Machine Learning

DevOps
