Well-qualified Full Stack Developer familiar with wide range of programming utilities and languages. Knowledgeable of backend and frontend development requirements. Handles any part of process with ease. Collaborative team player with excellent reputation for resolving problems and improving customer satisfaction.

Professional Experience

2022-06

Associate Software Engineer

-

Infosys Ltd., Beaverton, OR

Current

- o Primarily involved Design/Develop and maintain various functionalities of Web-Application.
- o Used JSON and XML formats to transfer data from server.
- o Experience in implementing Web Services
- o Used Maven to accelerate the development cycle.
- o Developed Servlets and JSP for Performing CRUD operations and Domain Specific entities.
- o Involved in the complete SDLC including the design of System Architecture, development of System Use Cases based on the functional requirements.
- o Used AWS deployment services to quickly set up a dynamic website and configured virtual servers.
- o Used JSP, HTML5, CSS3, and JavaScript to construct the dynamic web pages (presentation Layer) for the application.
- o Implemented Spring MVC controllers like Controller, Simple Form Controller and multi-Action Controller.
- o Implemented RESTful Web services to retrieve data from the client-side and made REST API calls from Angular JS and parsed the data to project to the client and handled the security and Authorization using Spring Security and OAuth.

- o Implemented DAO pattern to fetch data from database using Hibernate to carry out various database operations and avoid redundant database access statements.
- o Designed and developed business components using Spring Boot, Spring Dependency Injection (Core), Spring AOP and Spring Annotations.
- o Used Spring Data Framework to use the features of Spring JDBC and Spring ORM classes like JDBC Template and Hibernate Template to perform the database operations by connecting to Data sources available.
- o Involved in Daily Scrum (Agile) meetings, Sprint planning and estimation of the tasks for the user stories, participated in retrospective and presenting Demo at the end of the sprint.

Software Developer

Revature, North Miami Beach, United States

Revature Feb-2022 to June-2022

Java Expense Reimbursement System

The Java Expense Reimbursement System is a full-stack web application that allows employees to submit reimbursement requests for work related expenses. Users can log in using their email and password. Employees are able to submit new reimbursement requests and managers are able to view all submitted requests. Managers are also able to filter these requests based on the request status.

Responsibilities:

- Defined database schema to store application data using PostgreSQL, with DBeaver as a db client.
- Implemented the DAO design pattern using JDBC to perform CRUD operations on the database.
- Performed server side validation for

invalid input.

- Wrote unit tests using JUnit to test application logic.
- Defined web page structure using HTML, including interactive form elements to submit HTTP requests.
- Used the Collections framework and Stream API to store unique users and filter them by status
- Configured Java Servlets to respond appropriately to HTTP requests made from the browser.
- Managed version control throughout development using git.

Environment:

Servlets, Java, Git, SQL, HTML, Postman, JUnit, PostgreSQL, JDBC, Maven, AWS RDS, Bash, Swagger, Tomcat

Hospital Management Application

The Hospital Management Application is a full-stack web application that allows its users to interact with patient data.

Through our application, we can create, obtain and modify patient records.

Doctors and nurses can create, modify and obtain records. Doctors can add a treatment to each respective patient's diagnosis as well as pull up all patient records.

Responsibilities:

- Worked using IntelliJ IDEA 2022 and Visual Studio Code for development
- Utilized object oriented principles such as abstraction and inheritance
- Used Spring Data JPA to create database
- Accessed API endpoints using HttpClient
- Used Spring MVC for request/response handling
- Managed source control using Git version control

Environment:

Java, Spring Framework, Spring Boot, Spring Data, Spring MVC, Agile-Scrum, Angular 10, HTML, CSS, Bootstrap,

TypeScript, Git, PostgreSQL, Postman

Bank Runner

The Bank Runner Application is a full-stack web application that allows clients to register and manage their accounts. This application includes budget calculator, send/request money, and loan application functions. Clients can register accounts and log in using their username and password. Then they are able to edit their profile, view their accounts, create new savings or checking accounts. Clients are able to request money from others and send money to other accounts. Clients are able to calculate their budgets for their accounts in the website. And finally, clients are able to apply for loans.

Responsibilities:

- Scrum Master Lead
- Followed Agile methodology with SCRUM Meetings
- Maintain documentation of workflow with the intent to form a stable and self-organizing team
- Use Spring Security to handle login and password security

Environment:

Java, Spring Framework, Spring Boot, Spring Data, Spring MVC, Git, PostgreSQL, Maven, HTML, CSS, Bootstrap, Angular 10, TypeScript, JUnit, Postman, AWS RDS, Jenkins, DevOps, Sonarcloud

2000-08

-

2002-07

Actuarial Analyst

AON Cosulting, Buckhead, GA

- Reconciled plan participants' data on an annual basis and programmed the results using Access into the Actuarial software, Val2000 (Access based).
- Analyzed and reconciled financial statements and participant static data by comparing the results to prior year's data and calculated the Pension

Plan's liability in Excel.

- Performed variance analysis to explain actuarial gains/losses, due to plan and assumption changes.
- Read and interpreted plan documents for calculating benefits and preparing benefit statements.
- Streamlined the calculation of plan termination process through automation and advanced excel programming.

1999-09

Portfolio Analyst

-

State Bank & Trust Company, Quincy, MA

2000-06

- Monitored and analyzed financial, statistical and operational data trends.
- Researched fixed income alternatives to align with client asset allocation requirements.
- Resolved account discrepancies to ensure consistent accuracy.
- Communicated market developments, portfolio changes and annual performance information to clients.
- Assisted Portfolio Managers with due diligence and portfolio maintenance.

Education

2006-06

Master of Education: Math

-

Education/Educational Leadership

2009-07

Cambridge College - Cambridge, MA

- Majored in Educational Leadership
- Minored in Mathematics Education

1995-08

Bachelor of Science: Pure And Applied Mathematics

-

1999-05

Howard University - Washington, DC

Certifications

2019-07

Microsoft Professional Program for Data

Technical Skills

Java

Control Flow Statements, Arrays, Object class, Abstract class, and Interface, Exceptions and Unit Testing, Introduction to Java

SQL

DDL, DML, DQL, TCL, Views, Inner/Outer /Left/Right Joins, Constraints, Normalization
